

August 23rd

Monday 8/26 Finish ch. 1

Sections 1.7-1.8

Tuesday Lab: bring laptop

↳ Quiz @ 8am

* THIS WEEKEND WORK WITH flashcards (next Friday, 8/30 nomenclature lecture)

* Get Microsoft Excel

Sunday 8/25 → Problem Club w/ Kendall

↳ Eppley III, 7:30-9pm

Which of these are correct?

- ✓ $1 \text{ cm} = 1 \times 10^{-2} \text{ m}$
- ✗ $1 \text{ g} = 1 \times 10^3 \text{ kg}$
- ✓ $1 \text{ ks} = 1 \times 10^3 \text{ s}$
- ✓ $1 \times 10^9 \text{ ng} = 1 \text{ g}$
- ✓ $1 \text{ mmol} = 1 \times 10^{-3} \text{ mol}$
- ✗ $1 \text{ pm} = 1 \times 10^{-12} \text{ m}$
- ✗ $1 \text{ L} = 1 \times 10^{-6} \text{ mL}$
- ✗ $1 \times 10^{-9} \text{ ng} = 1 \text{ g}$
- ✓ $1 \text{ L} = 1 \times 10^6 \text{ mL}$
- ✓ $1 \text{ mg} = 1 \times 10^{-3} \text{ g}$

Which is larger? 154 pm or $7.7 \times 10^{-9} \text{ cm}$

$7.7 \times 10^{-9} \text{ cm} \rightarrow \text{pm}$

$$\text{length} = \frac{7.7 \times 10^{-9} \text{ cm}}{1 \text{ cm}} \left| \frac{1 \times 10^{-2} \text{ m}}{1 \text{ m}} \right| \left| \frac{1 \text{ pm}}{1 \times 10^{-12} \text{ m}} \right| = \boxed{77 \text{ pm}}$$

convert 17 lb cat into kg
given $454 \text{ g} \approx 1 \text{ pound}$

Insulin dosage for cat = 7 mL of insulin per kg of cat

$$\text{Mass} = \frac{17 \text{ lb}}{1 \text{ lb}} \left| \frac{454 \text{ g}}{1 \text{ lb}} \right| \left| \frac{1 \text{ kg}}{1 \times 10^3 \text{ g}} \right| = \boxed{7.72 \text{ kg}}$$

$$\text{dose} = \frac{7.72 \text{ kg}}{1 \text{ kg cat}} \left| \frac{7 \text{ mL insulin}}{1 \text{ kg}} \right| = \boxed{54 \text{ mL}} \quad \text{"U40 syringes"}$$

$0.50 \text{ mL} = 40 \text{ "units"}$

$$\text{dose} = \frac{54 \text{ mL}}{1 \text{ mL}} \left| \frac{1 \times 10^{-6} \text{ L}}{1 \text{ mL}} \right| \left| \frac{1 \text{ mL}}{1 \times 10^{-3} \text{ L}} \right| = \boxed{0.054 \text{ mL}} \left| \frac{40 \text{ "units"}}{0.50 \text{ mL}} \right|$$

$\rightarrow 4.32 \text{ "units"}$

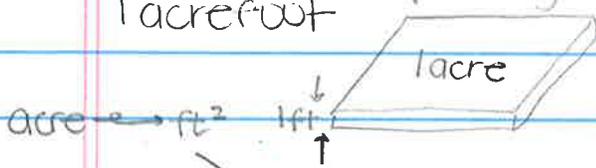

What is the weight in pounds of a gallon of water given the density of water is 1.0g/mL (or 1.0g/cm³)?

August 23rd

Volume (1 gallon) → quarts → L → mL → mass(g) → weight(lbs)
density

$$\text{weight} = \frac{1 \text{ gallon}}{1 \text{ gallon}} \cdot \frac{4 \text{ qts}}{1.06 \text{ qts}} \cdot \frac{1 \text{ L}}{1 \times 10^{-3} \text{ L}} \cdot \frac{1 \text{ mL}}{1 \text{ mL}} \cdot \frac{1 \text{ g}}{454 \text{ g}} \cdot \frac{1 \text{ lb}}{1 \text{ lb}} = \boxed{8.3 \text{ lbs}}$$

Water for crop irrigation is measured in acrefeet. 1 acrefoot

Given: 640 acres/mi², 1ft = 12in., 1mi = 5,280ft., 1in. = 2.54cm
 How many ft³ are in an acreft?

$$\text{vol} = \frac{1 \text{ acre}\cdot\text{ft}}{640 \text{ acres}} \cdot \frac{1 \text{ mi}^2}{1 \text{ mi}^2} \cdot \frac{5,280^2 \text{ ft}^2}{1 \text{ mi}^2} = \boxed{4.4 \times 10^4 \text{ ft}^3}$$
